

An integrated Security Operation Center

Our Goals

- Global delivery center with plug and play platform
- Expensive malware management with a unified & real-time response
- Effective analysis and detection of threat

SOC Portfolio

Advanced security monitoring

Detecting threats, vulnerabilities and malware at the earliest stage. With SOC network experts, you can ensure complete security of your enterprise.

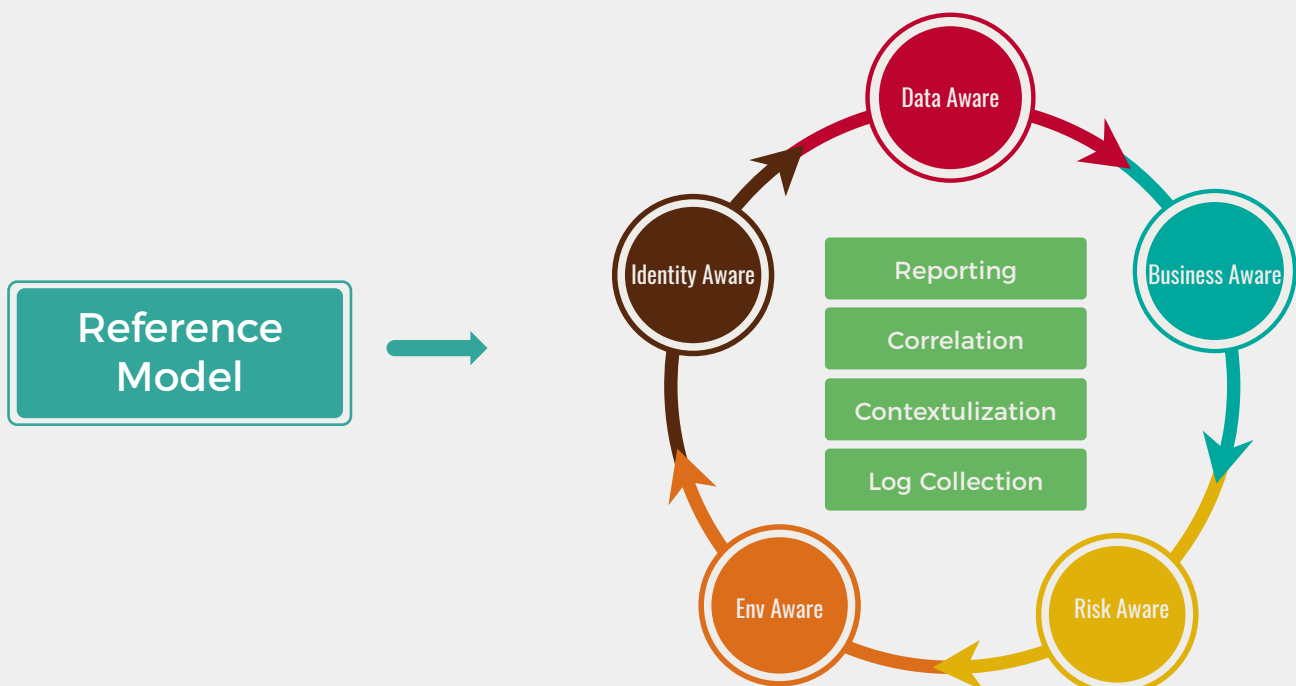

Managed SOC

16+ years of experience in cyber security operations, we provide advanced technical skills to mitigate security threats.

Comprehensive analytics

Our experts monitor the frequently changing threat scenario and analyze cross-platform threats to offer a wide range of IT security.

Skillmine's Approach

01

Build

(Design & Implement)

02

Operate

(Run the SOC for a defined Period)

03

Transfer

(Transition Processes & People)

Product

- Detect
- Prevent
- Control

Process

- Event Monitoring
- Event Analysis
- Event Processing
- Event Reporting
- Overall Site Analysis

People

- 3 Layer Structure
- Underpinning Knowledge Base
- Shift Rotation
- Lean and Efficient

1 Guidance & Planning

Define objectives and requirements that will govern the design and use of SIEM

2 Infrastructure

Define, Design and implement servers, software, log collectors etc comprising the SIEM system architecture

3 Implementation

Design, Integrate and implement components needed to generate alerts and visibility

4 Operations & Support

Define and manage processes needed to ensure ongoing support, management and tuning of SIEM

5 Incident Response

Define objectives and requirements that will govern the design and use of SIEM

6 Metrics & Reporting

Establish measurement, reporting and communication capabilities to demonstrate changing state on Security

7 Enhance

Continuously Improve & Enhance the solution capabilities based on new requirements and gain operational efficiencies
