

Applications & Mobile Apps security without limiting Business Operations

To thrive in today's connected world, your applications and customers need to be connected. Increasingly, most applications are rendered or accessed through Mobile devices, which are doubly appealing to hackers for personal and business data.

Skillmine Application Security Services helps you assess current state of security in your applications. It then provides the Techniques & Best Practices to achieve layered security to mitigate today's worst threats. Our Security practices are based on robust experiences and sound methodologies like INSCAPE & OWASP etc.

Using our Services, Businesses can protect themselves by applying security best practices around passwords, network segmentation and security-rich software development to achieve Secured Competitive Edge.

Our application security services provide

Application security assessment

Help improve security by assessing your application vulnerability

Web & Mobile Security

Identifying Vulnerabilities on Web Applications and Mobile Apps. Provide relativity of unknown threats and Risk posture of the apps with remediation recommendations
