06

Skillmine has been selected by a leading Japanese multinational conglomerate corporation headquartered in Chiyoda, Tokyo, Japan to holistically transform its IT Infrastructure.

SCALING FOR GROWTH

The Cash Cycle Optimizer CCO®

The banks, as the principal providers of the money, have the responsibility of moving physical cash from one place to another place within a city/town or across the cities/towns.

Cash-in-transit (CIT) is physical transfer of bank notes, coins, credit cards and items of high value from one location to another. The locations include cash centers (or cashpoints) viz., cash processing centers, bank branches, ATMs and large retail outlets.

For the day-to-day cash operations, the banks may have to order additional cash from the central bank to meet the cash disbursements to their customers and also need to refill the ATMs with the cash.

The banks cannot hold extra cash in the branches and in the ATMs due to cost of the interest on the reserve cash. The banks need to ensure that ATMs are filled sufficiently with cash to meet the customers' withdrawals and also minimize the trips by the CIT company to the ATM locations.

Skillmine has embarked on a new journey through a business partnership with PlanFocus Software GmbH, based in Munich, Germany.

Skillmine is bringing the PlanFocus' CCO software to the Indian businesses with the motto of empowering banking, retail, and Cash-in-Transit companies to drive optimization and cost reduction in cash management.

Get more info on [PlanFocus](#).

The cash managers at the bank branches, cash processing centers and CIT companies strive to reduce the total cost of cash ownership without affecting the quality of service to their customers. While the actual details of cash management strategy vary greatly between banks and the CIT companies, a key element for all is the cost factor and the cost of cash needs to be optimized

The above challenges can be addressed efficiently and effectively by implementing the Cash Cycle Optimizer CCO® Software Suite offered by Skillmine in partnership with planfocus software based in Munich, Germany. It can significantly reduce the cost burden for all the stakeholders involved in the cash cycle and the investment made on the CCO® Solution can be recovered faster.

The CCO® Suite is a modular and scalable solution with configuration flexibility to adjust to your business needs. It can optimize the following aspects of cash handling:

1

Forecasting and Planning with Artificial Intelligence (AI) based algorithms

2

Cash Order Lifecycle Tracking

3

Synchronization of the Cashpoints

4

CIT Management

5

Cash Center Management

Creating Capability

- Skillmine's INSEED program is empowered with vision to groom tech graduates to technocrats and form a rock-solid platform for their prospective career with well crafted training models.
- INSEED employs symbiotic collaboration that benefits client with consistent & reliable workforce and empowers candidates with advanced technologies and tools.
- Skillmine plays a pivotal role in grooming candidates in line with Business demands and eventually our INSEED candidates becomes core competency of Client technology teams.
- We have successfully finished 10+ batches in association with reputed institutes and prominent institutions covering latest technology streams like IT Operation, Cybersecurity, Cloud Engineering and Datacenter networking.
- Now, we are targeting next gen technologies such as InfoSec automation and orchestration (SOAR) AI & ML, Service Now, APM.
- INSEED has become the key catalyst in Skillmine's transformation.

Skillmine's INSEED evolved as the intrinsic value partner for clients to build their core competency and an eminent platform for graduates to build rewarding career.
