One Weak Password.
700 Jobs Lost.

A 158-year-old UK logistics company,
was forced to shut down.

This is how it happened and
how to prevent the same fate.

How it started

A hacker from the Akira ransomware group guessed a weak employee password.

Internal systems were encrypted.

Operations stopped.

700 employees lost their jobs.

Critical IAM failures that led to the breach

- No strong password policy enforcement
- No anomaly or behavior-based alerts
- No multi-factor authentication
- No breach detection mechanism

The Reality

This was more than a cyberattack.

It was a complete breakdown in
Identity & Access Management strategy.

One overlooked login can lead to
full-scale business disruption.
