

NEWSMINE

Insight.
Innovation.
Impact.

This edition highlights disciplined AI adoption, secure access innovation, and scalable enterprise execution. From AI-augmented Agile engineering and cybersecurity wins to major platform milestones across BFSI and data modernization, our focus remains clear: accelerate with structure, innovate with governance, and scale with stability.

Here's a snapshot of the progress driving this momentum.

AI Copilots Reshaping
Agile Delivery

Major BFSI Go-Lives &
Platform Expansions

DataV Migration to
ClickHouse Completed

Strengthened Cybersecurity
& Identity Frameworks

Tech **Spotlight**

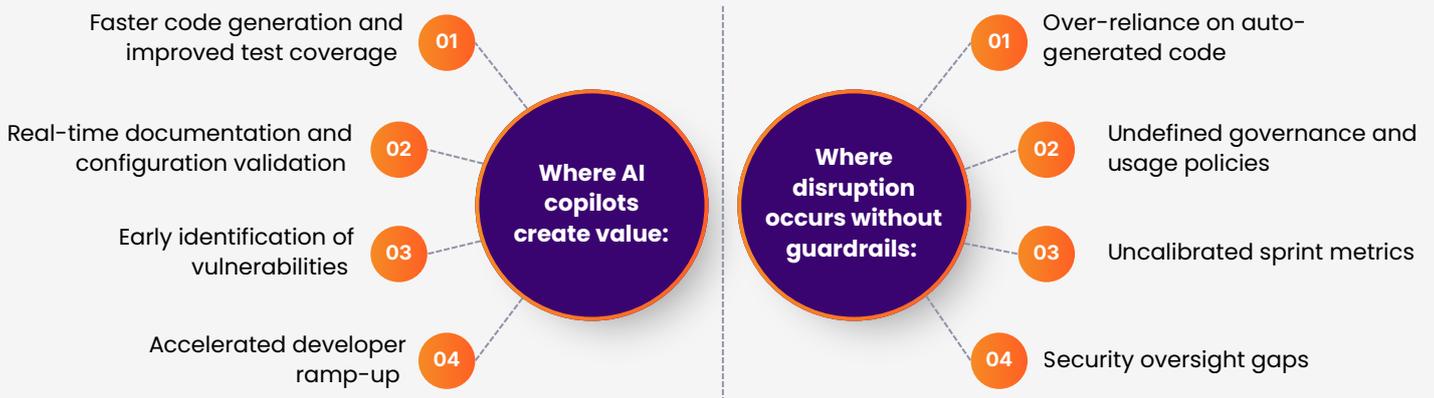

Agile Engineering in the Age of AI Copilots Productivity Boost or Process Disruption

AI copilots are no longer experimental. They assist developers in writing code, generating tests, documenting APIs, and identifying vulnerabilities in real time. For Agile teams, this represents a major acceleration in delivery capability. However, acceleration without structure can create instability.

The real question is not whether AI improves productivity. It is whether organizations are prepared to integrate it within governance, DevSecOps, and disciplined delivery frameworks.

AI now influences every phase of the sprint lifecycle, from backlog refinement to deployment. While it can increase velocity and shorten onboarding cycles, it can also introduce hidden technical debt, fluctuating sprint predictability, and compliance blind spots if left unchecked.

AI does not replace Agile maturity. It amplifies it. Teams with strong processes, standardized workflows, and mature DevSecOps pipelines see measurable gains. Teams without structure experience volatility.

At Skillmine, we view AI copilots as force multipliers that must be embedded within controlled engineering models. By aligning AI adoption with governance, compliance, and secure delivery practices, enterprises can elevate developer productivity without compromising stability.

New Wins

Cybersecurity Staffing

Skillmine has won a new engagement with a leading cybersecurity organization in India to provide L1 and L2 SOC Engineers.

This partnership strengthens the client's 24/7 security monitoring and incident response capabilities while reinforcing Skillmine's expertise in delivering high-impact cybersecurity talent at scale.

Product Highlights

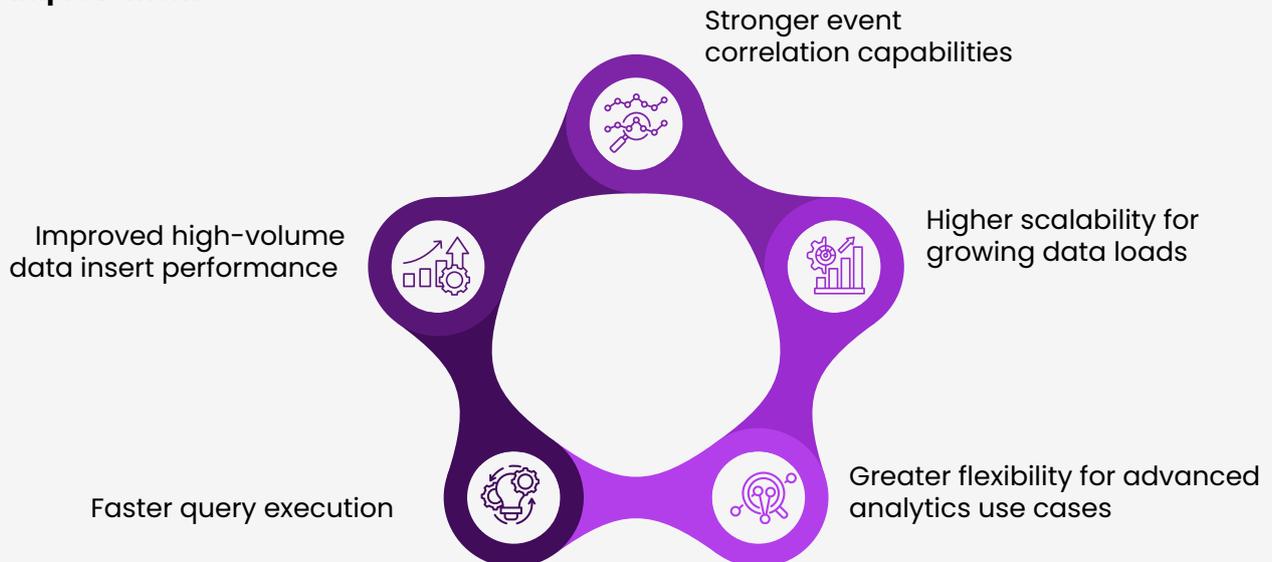

What's New in Skillmine DataV

Data Warehouse Migration – ElasticSearch to ClickHouse

DataV has successfully completed a strategic migration of its data warehouse from ElasticSearch to ClickHouse, significantly strengthening its analytics backbone. This upgrade enhances performance, scalability, and analytical depth across the platform.

Key Improvements:

This evolution enables DataV to deliver more powerful, real-time insights at enterprise scale.

Product Highlights

What's New in Skillmine Auth

Reverse Proxy Capability Introduced

Skillmine Auth now features a built-in Reverse Proxy capability, expanding enforcement and application-layer access controls across enterprise environments.

Key Capabilities:

Desktop thick-client access restriction via reverse proxy agent

02

03

Fine-grained access policy enforcement

HTTP/HTTPS traffic restriction

01

04

Enhanced perimeter and application-level security

This enhancement strengthens secure access control while supporting both modern and legacy applications.

Oracle EBS Integration – Custom Plugin Development

Skillmine Auth has achieved a significant integration milestone with Oracle E-Business Suite (EBS). Given that Oracle EBS does not natively support standard SAML integrations, a custom authentication plugin was developed to enable seamless connectivity.

Integration Benefits:

SSO enablement for Oracle EBS

Extended authentication control

Centralized identity governance

Support for complex legacy environments

This breakthrough opens new enterprise integration possibilities within traditionally hard-to-integrate ecosystems.

What's New

Phase 1 Go-Live for Leading NBFC

Skillmine Auth has successfully gone live with Phase 1 implementation for a leading NBFC in India.

Highlights:

- 4 critical business applications integrated
- Centralized SSO deployed
- MFA enforcement enabled
- Production stabilization underway

This milestone significantly strengthens the organization's identity and access security framework while accelerating its Zero Trust journey.

Platform Expansion for Microfinance Institution

Skillmine Auth has expanded its deployment within a prominent microfinance institution, integrating 3 additional internal applications.

Expansion Highlights:

- Broader SSO coverage
- Enhanced access governance
- Stronger authentication controls

This engagement further solidifies Skillmine's growing footprint in the BFSI sector and reinforces long-term partnership value.

DataV Milestone Achieved

Skillmine's DataV platform has secured its first official KPI sign-off from a leading technology enterprise, validating dashboard accuracy and performance benchmarks.

A strong milestone that reinforces business alignment and data-driven confidence.

INTRODUCING

We're excited to launch Skillmine Utils, a free platform that brings together 49 essential developer utilities in one secure workspace.

Developers rely on tools like JWT decoders, JSON formatters and CSS formatters every day, often across multiple websites. Skillmine Utils brings these commonly used utilities into one place to make everyday development tasks faster and simpler.

Built for the global developer community, Skillmine Utils is completely free to use.

Explore the tools here :[Skillmine Utils – Free Browser-Based Developer Utilities](#)

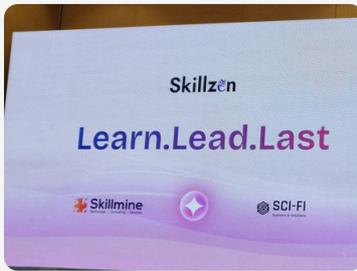

Channel Partnerships

Thrilled to welcome Network Techlab, UniteCore, Syndrome NewEdge as Skillmine's Preferred Reseller Partner!

Together, we'll expand Skillmine Auth, COMPLYment & DataV to empower enterprises with stronger security and compliance.

Event Gallery

A proud moment at the 22nd Future of L&D Summit & Awards 2026.

SkillZen – Powered by Skillmine Technology, (in association with Scifi Systems and Solutions) joined as the Silver Partner and was recognised as the Best AI-Powered Learning Experience Platform.

At the summit hosted by UBS Forums Pvt. Ltd., Anshika Agrawal shared a key message, The Complete Delusion – finishing a course doesn't equal building capability.

Grateful for the recognition and the inspiring conversations.

Skillmine ThoughtGrid

Endpoint management is no longer just an IT task. As hybrid work, cloud systems, and AI adoption expand across enterprises, every device connected to the network becomes both a productivity tool and a potential security risk. This shift is pushing endpoint governance into boardroom conversations.

Read this blog to understand why endpoint management has become a strategic priority in 2026, how expanding device ecosystems are increasing enterprise risk and what modern organizations must implement to maintain security, compliance and operational resilience.
