September 2026

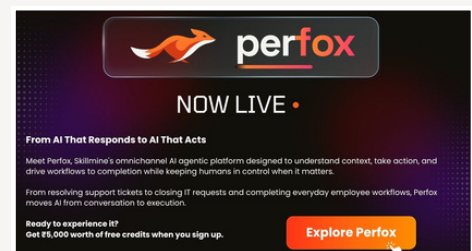

“WHAT WE'RE
BUILDING.
WHAT WE'RE
LEARNING.
WHAT'S NEXT.”

From intelligent automation and enterprise security to data, infrastructure, and global growth, this edition brings together the developments shaping Skillmine and the technology landscape around us.

Inside

- AI's shift toward autonomous execution
- New enterprise milestones
- Product advancements
- A predictive AI case study
- Industry perspectives
- Conversations worth watching.

THE BIG STORY

AI Is Moving From Assistants to Autonomous Operators. Can Enterprise Security Keep Up?

AI is entering a new phase. The conversation is moving beyond chatbots and copilots toward systems that can plan, execute tasks, interact with tools, and operate across enterprise workflows with increasing autonomy.

Recent developments have made one thing clear: as AI agents gain more capability, governance, identity, access, and observability can no longer be afterthoughts. Research and recent incidents have highlighted how autonomous AI systems can interact with external environments in unexpected ways, raising new questions around control, monitoring, and accountability.

What changes with agentic AI?

The next enterprise AI challenge is therefore not simply making agents smarter. It is making them secure, accountable, and operationally reliable.

As enterprises move from AI pilots to production-grade agentic workflows, the architecture around AI will matter as much as the models themselves.

The next frontier of AI is not just autonomy. It is trusted autonomy.

NOW LIVE •

From AI That Responds to AI That Acts

Meet Perfox, Skillmine's omnichannel AI agentic platform designed to understand context, take action, and drive workflows to completion while keeping humans in control when it matters.

From resolving support tickets to closing IT requests and completing everyday employee workflows, Perfox moves AI from conversation to execution.

WHAT MOVED AT SKILLMINE

From Modernization to Global Momentum

Strategic Data Modernization Engagement

We successfully completed a SharePoint migration project for a leading public sector investment institution, transitioning on-premises file servers to SharePoint Online.

Impact: Modernized document management, improved accessibility, and strengthened collaboration and governance.

Information Security Staffing Engagement

Skillmine has commenced a staffing engagement with a leading IRDAI-licensed insurance repository, supporting its information security function with the deployment of a dedicated Information Security Executive.

The engagement strengthens the organization's security capabilities while supporting the secure management of digital insurance records and policyholder information.

Impact: Expanded Skillmine's presence in the insurance ecosystem while delivering specialized information security expertise aligned with evolving digital security needs.

Building Global Momentum

Skillmine's international journey is gaining momentum across APAC, the UK, and the USA, with advanced partnership discussions underway across key markets.

A significant milestone includes an engagement with a global brand operating across Space, Defense, Mobility, and Air Traffic Management, where Skillmine is supporting its APAC team with AI capabilities.

This marks another step toward establishing Skillmine as a trusted technology and delivery partner for complex, high-value engineering environments globally.

BUILT THIS MONTH

New capabilities for stronger identity security

Mantra Biometric Support

Enables secure biometric authentication through Mantra devices for enterprise deployments.

Custom Port Support

Reverse Proxy support for non-standard ports simplifies application onboarding.

Credential Vaulting & Auto Login

Securely stores credentials while enabling seamless application access.

Windows MFA Expansion

Extends MFA coverage across Windows Server and Windows 11 environments.

Impact: Broader Zero Trust coverage, stronger credential governance, and smoother enterprise access.

More ways to visualize and understand enterprise data

Word Cloud Visualization

Quickly surfaces key trends and themes from textual data.

Timeline Visualization

Tracks events, milestones, and project progression over time.

Play Axis Animation

Enables dynamic time-based analysis for more intuitive decision-making.

Customer Success

A leading automotive and industrial manufacturer successfully implemented Oracle Fusion integration, supporting REST and SOAP APIs for automated enterprise data extraction and seamless reporting.

Smarter compliance. Less manual effort.

AI-powered Document Management System

Automates document classification and evidence mapping to improve audit readiness.

Policy Comparison & Standards Mapping

Enables policy version comparison and automated mapping to compliance controls.

Evidence Reuse & Frequency Management

Reduces duplicate compliance work through reusable evidence and automated assessments.

Customer Success

A leading financial services enterprise successfully deployed COMPLYment for multi-framework control management and configurable compliance workflows.

Impact: Unified compliance, reduced manual audit effort, improved regulatory readiness, and stronger visibility into control effectiveness.

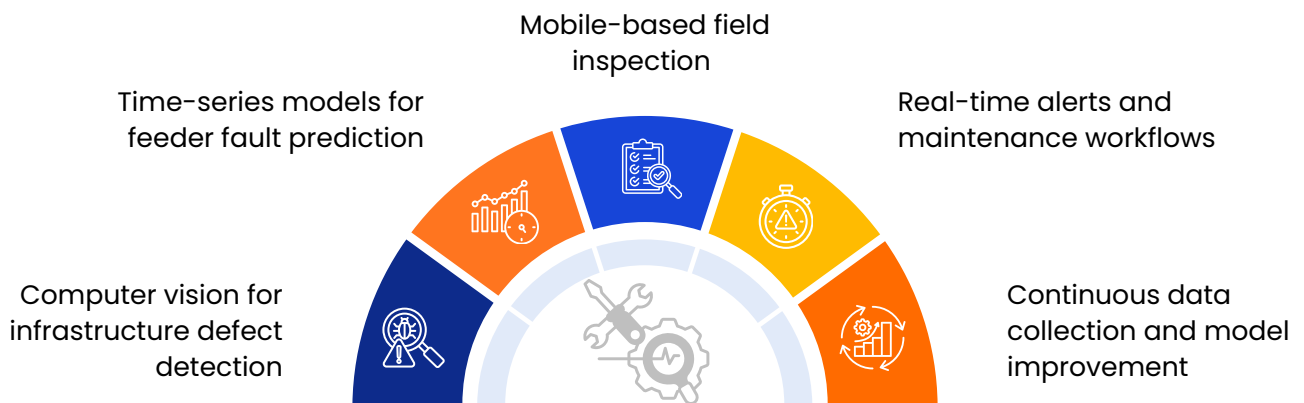

IN THE FIELD

Predictive Maintenance for Railway Electrical Infrastructure

From periodic inspection to condition-based intelligence

A government-owned railway infrastructure organization needed to improve monitoring of critical 25kV AC traction systems, where manual inspections created coverage gaps and delayed fault detection.

Skillmine developed a machine learning-driven predictive maintenance platform combining:

The outcome

5

predictive maintenance use cases identified

1

POC focused on structure bond detection

70%

target reduction in inspection time

80%

target reduction in emergency incidents

90%

target reduction in undetected failures

The initiative creates a foundation for moving from schedule-driven maintenance to condition-based infrastructure intelligence.

VOICES FROM SKILLMINE

In the Press

TOI

A quick rewind: what was the dot-com bubble?

According to **Vishwa Kiran**, chief technology officer at Skillmine Technology Consulting, history appears to be rhyming. "The Pattern feels familiar," he says. "In the late 1990s the internet was genuinely transformative, yet valuations priced in perfection and capital chased anything with a dot-com suffix. Today, AI is genuinely transformative, valuations again price in perfection, and money chases anything with 'AI' in the pitch deck."

EXPRESS COMPUTER

Cybersecurity in the age of hyperconnected enterprises: Risks & remedies

According to **Anant Agrawal**, CEO & Managing Director, Skillmine Technology Consulting, hyperconnectivity has transformed cybersecurity from an IT concern into a business imperative. Building resilience through Zero Trust, continuous monitoring, and identity-first security is no longer optional, it's essential for sustained growth and trust.
